Characteristic of heat of compression desiccant air dryer

High efficiency and energy saving;

The pressure dew point can reach - 20 °C ~ - 40 °C

It is equipped with imported brand PLC controller to realize chain function;

High quality switching valve, stable and reliable, can ensure the integrity of the working process, prolong the working life of components;

Special adsorbent with high hygroscopicity is selected with uniform shape and size, high strength, low dew point, less dust and long service life;

The unique gas distribution design ensures that the gas distribution is uniform when the high temperature gas is heated and regenerated and the low temperature gas adsorption mode is adopted, so that the adsorbent at the edge of the adsorption tower is fully utilized, and the stroke tunnel flow effect is avoided;

Three level drainage function: liquid level, time and manual operation;
